The Saskatchewan Geospatial Imagery Collaborative (SGIC) aerial photography program produces 60 cm ortho rectified color and color infra-red imagery along with a 100 m grid digital elevation model. Final color orthophotos are delivered in Township sized files.

The 2008 and 2009 and 2010 imagery is available for access and viewing at [www.flysask.ca](http://www.flysask.ca).

The SGIC Airphoto program will continue in Summer and Fall 2011 to complete the province after which an ongoing maintenance program will be implemented.
